

## IN THE CLAIMS

Please amend claims 1 and 16 as follows:

1. (CURRENTLY AMENDED) A method for operating a wireless network, comprising:
  - (a) collecting and analyzing information from the wireless network into a collection and analysis system coupled to the wireless network, wherein the information includes location information on a plurality of mobile transceivers operating within communicating with the wireless network; and
  - (b) optimizing the wireless network's operation from a network control system coupled to the wireless network by intelligently steering radio frequency (RF) signal beams transmitted from the wireless network in the direction of one or more of the plurality of mobile transceivers using the collected and analyzed information.
2. (ORIGINAL) The method of claim 1, wherein the location information comprises E911 location information.
3. (ORIGINAL) The method of claim 1, wherein the information further includes one or more types of information selected from a group comprising Hand Off (HO) information, Power information, Measurements, and System Parameters from the wireless network.
4. (ORIGINAL) The method of claim 1, wherein the information is collected when certain defined thresholds are triggered.
5. (ORIGINAL) The method of claim 1, wherein the optimizing step further comprises dynamically allocating radio frequency (RF) signal power in the wireless network based on the collected and analyzed information.
6. (ORIGINAL) The method of claim 5, wherein the dynamically allocating step further comprises dynamically assigning RF signal power to cells, sectors within cells, and mobile transceivers based on the collected and analyzed information.

7. (ORIGINAL) The method of claim 1, wherein the optimizing step further comprises setting dynamic dedicated handoff (HO) thresholds for individual mobile transceivers based on the collected and analyzed information.

8. (ORIGINAL) The method of claim 7, wherein the individual mobile transceivers each have a unique, assigned HO (hand off) threshold.

9. (ORIGINAL) The method of claim 8, wherein the optimizing step further comprises performing handoffs for individual mobile transceivers based on their unique, assigned HO (hand off) threshold and their location.

10. (ORIGINAL) The method of claim 9, wherein the performing step comprises performing handoffs for individual mobile transceivers in order to minimize interference levels.

11. (CANCELED)

12. (PREVIOUSLY PRESENTED) The method of claim 1, wherein the intelligently steering step further comprises intelligently forming an RF signal beam based on the collected and analyzed information.

13. (ORIGINAL) The method of claim 1, further comprising identifying and resolving problems using the collected and analyzed information.

14. (ORIGINAL) The method of claim 13, wherein the identifying and resolving step further comprises identifying problems in the wireless network, and correlating the identified problems with the collected and analyzed information.

15. (ORIGINAL) The method of claim 14, wherein the correlating step further comprises correlating the identified problems with mobile transceiver location information from the collected and analyzed information.

16. (CURRENTLY AMENDED) A system for operating a wireless communications network, comprising:

(a) a data collection and filter system, coupled to the wireless communications system, for collecting and analyzing information from the wireless network, wherein the information includes location information on a plurality of mobile transceivers operating within communicating with the wireless network; and

(b) a network control system, coupled to the wireless communications system and the data collection and filter system, for optimizing the wireless network's operation by intelligently steering radio frequency (RF) signal beams transmitted from the wireless network in the direction of one or more of the plurality of mobile transceivers using the collected and analyzed information.

17. (ORIGINAL) The system of claim 16, wherein the location information comprises E911 location information.

18. (ORIGINAL) The system of claim 16, wherein the information further includes one or more types of information selected from a group comprising Hand Off (HO) information, Power information, Measurements, and System Parameters from the wireless network.

19. (ORIGINAL) The system of claim 16, wherein the information is collected when certain defined thresholds are triggered.

20. (ORIGINAL) The system of claim 16, wherein the network control further comprises means for dynamically allocating radio frequency (RF) signal power in the wireless network based on the collected and analyzed information.

21. (ORIGINAL) The system of claim 20, wherein the means for dynamically allocating further comprises means for dynamically assigning RF signal power to cells, sectors within cells, and mobile transceivers based on the collected and analyzed information.

22. (ORIGINAL) The system of claim 16, wherein the network control further comprises means for setting dynamic dedicated handoff (HO) thresholds for individual mobile transceivers based on the collected and analyzed information.

23. (ORIGINAL) The system of claim 22, wherein the individual mobile transceivers each have a unique, assigned HO (hand off) threshold.

24. (ORIGINAL) The system of claim 23, wherein the network control further comprises means for performing handoffs for individual mobile transceivers based on their unique, assigned HO (hand off) threshold and their location.

25. (ORIGINAL) The system of claim 24, wherein the means for performing comprises means for performing handoffs for individual mobile transceivers in order to minimize interference levels.

26. (CANCELED)

27. (PREVIOUSLY PRESENTED) The system of claim 16, wherein the means for intelligently steering further comprises means for intelligently forming an RF signal beam based on the collected and analyzed information.

28. (ORIGINAL) The system of claim 16, wherein the data collection and analysis system further comprises means for identifying and resolving problems using the collected and analyzed information.

29. (ORIGINAL) The system of claim 28, wherein the means for identifying and resolving further comprises means for identifying problems in the wireless network, and correlating the identified problems with the collected and analyzed information.

30. (ORIGINAL) The system of claim 29, wherein the means for correlating further comprises means for correlating the identified problems with mobile transceiver location information from the collected and analyzed information.
